Printers at SPOL

We currently have two printers for access on the network at SPOL.   Both are setup to be a standard TCP/IP Printer.   Depending on your operating system you may have the drivers already preinstalled. Most version of the Mac OS have it preinstalled as well as Centos and Windows 7. With many older operating systems you may need to download drivers from HPs website here - http://www8.hp.com/us/en/support-drivers.html.

Color Printer:
